

2006 *Astronomy* magazine index

Subject index

Numbers

2M1207b (extrasolar planet), 1:41–1:42
73P/Schwassmann-Wachmann 3 (S-W 3)
comet. *See* Comet 73P/Schwassmann-Wachmann 3 (S-W 3)
2003 UB (Xena) (planet), 1:48, 2:72
moon of, 1:32
size of, 7:28
2004 XR (Buffy) (Kuiper Belt object), 4:30
2204 MN (asteroid), 1:42

A

Advanced Camera for Surveys (ACS), 10:24
Advanced Observing Program (AOP), 5:84–5:87
Aeronomy of Ice in the Mesosphere (AIM), 10:24
AIM (Aeronomy of Ice in the Mesosphere), 10:24
Akari infrared satellite, 9:29
Algol (star), 11:20
Andromeda (constellation), 1:22
Andromeda Galaxy, 1:47
distance to, 2:30
Spitzer photos of, 10:22
violent past of, 2:24
antimatter, 12:30–12:35
AOP (Advanced Observing Program), 5:84–5:87
Apophis (asteroid), 5:46–5:51
asteroids
See also names of specific asteroids
color of, 6:36–6:41
navigating asteroid belt, 12:63
nucleus of, 7:73
between orbits of Mars and Jupiter, 8:38–8:39
Astro (satellite), 10:28
astronomy terminology, 6:14
astrophotography
in Chile, 4:82–4:87
making lunar mosaic, 12:74–12:77
in urban setting, 11:76–11:79
Atlantis (space shuttle), dismantling of, 6:26
atmospheric aerosols, role in climate change, 11:27
ATV (Automated Transfer Vehicle), 11:28
August, observing in, 8:22
Automated Transfer Vehicle (ATV), 11:28

B

Bacolor Crater (on Mars), 5:29
Barnard's Star, 3:24
Bennet objects, 7:76–7:81
BIG (Blue Infalling Group), 7:25
Big Bang theory
darkness after, 6:30–6:35
as most-recent event in cataclysms forming universe, 10:26
Big Dipper (constellation), 5:22, 6:20
Billy Crater (of moon), 6:28
binary stars, planets produced from, 6:27
binoculars, using binoviewer with, 1:94–1:95
black holes
at center of NGC 1097 (galaxy), 2:22

collisions of, 5:34–5:39
and galaxy mergers, 5:32
in NGC 1275 (galaxy), 4:31
whether at core of Milky Way Galaxy, 11:30
why emit jets of materials, 5:72
why universe isn't supermassive black hole, 12:62
Blue Infalling Group (BIG), 7:25
brown dwarf stars
closest known, 11:31
number of, 1:32
X-ray flare from, 11:31

C

CALIPSO (Cloud-Aerosol Lidar and Infrared Pathfinder Satellite Observation), 11:27
Canadarm2. *See* Space Station Remote Manipulator System (SSRMS)
Cancer (constellation), 4:20
Canis Major (constellation), 2:18
Canon 20Da (camera), 7:90–7:93
Capella (star system), 3:20
Cartwheel Galaxy, 5:30
Cassini (spacecraft)
Dione flyby, 2:26, 3:28
Saturn's secrets revealed by, 7:30–7:35
Cassiopeia (constellation), 11:22
CCD (charge-coupled-device) cameras, 11:76–11:79
Ceres (asteroid), 1:31
CG4 (nebula), 7:22
Chang e'1 (lunar orbiter), 10:24
Chaple's Arc, 9:18
charge-coupled-device (CCD) cameras, 11:76–11:79
Chasma Boreale (on Mars), 9:25
Chile, astrophotography in, 4:82–4:87
Cigar Galaxy. *See* M82 (galaxy)
Cloud-Aerosol Lidar and Infrared Pathfinder Satellite Observation (CALIPSO), 11:27
clouds
dark clouds, 7:68–7:69
defining, 4:26
cloudshine, 2:29
Cluster (spacecraft), 11:31
CMB (cosmic microwave background), 9:36–9:41
Columbus laboratory, 8:30
Comet 73P/Schwassmann-Wachmann 3 (S-W 3), 5:82–5:83, 8:31, 9:27
comets
See also names of specific comets
dust-to-ice ratio, 2:30
nucleus of, 7:73
straying close to Sun, 3:36–3:41
Comet Temple 1, Deep Impact (probe)
impact with
data found, 1:30, 1:46
water produced from, 7:24
Comet Wild 2, 7:23
CONvection, ROTation, and planetary Transits (CONvection) spacecraft, 7:22
COROT (satellite), 8:28
cosmic microwave background (CMB), 9:36–9:41
cosmic-structure evolution, 6:28
cosmological distances, 9:62

Crab Nebula (M1), 4:24, 10:10–10:11
craters, on Earth, 8:40–8:51
Crew Exploration Vehicle, 11:26
Cygnus (constellation), 7:62–7:66

D

dark clouds, 7:68–7:69
dark energy, 9:30–9:35
dark galaxies, 7:22
dark matter, and photons, 9:63
darkness, after Big Bang, 6:30–6:35
Dawn mission, 10:24
Deep Impact (probe), impact with Comet Temple 1
data found, 1:30, 1:46
water produced from, 7:24
Deep Space Network (DSN) antenna, 11:27, 11:29
De Gasparis (lunar crater), 8:27
Denkmeier II Powerswitch Binoviewer, 1:94–1:95
deuterium, 1:30
dimensions, number of, 5:72–5:73
Dione (Saturn's moon), 2:26, 3:28
DioptRx telescopic lenses, 11:74–11:75
Discovery (space shuttle), 1:43
distances, cosmological, 9:62, 12:63
DSN (Deep Space Network) antenna, 11:27, 11:29
Dumbbell Nebula (M27), 10:18
dwarf spheroidal galaxies, 4:76–4:77

E

Earth
axis of, looping changes in position of, 11:29
climate change, 10:29, 11:27, 12:27
craters on, 8:40–8:51
crustal changes caused by earthquake, 11:25
largest crustal oscillation on, 1:37
eclipses, solar
of March 29, 2006, 3:52
observing, 9:16
of September 22, 2006, 9:74–9:75
viewing from Mediterranean, 7:84–7:87
Egypt, ancient, 6:62–6:67
Elefant Trunk Nebula (IC 1396), 12:28
Enceladus (Saturn's moon), 6:24
Eta Carinae (star), 3:28
Europa (Jupiter's moon), 8:27
extrasolar planets
atlas of, 11:96
detecting from wobbles, 8:90–8:91
imaged, 1:41–1:42
search for, 11:30–11:37
extraterrestrial life, how Earth would be viewed by, 5:62–5:67

F

flat universe, 11:70
foothill gang, 3:78–3:85
free-floating planets, 11:44–11:47

G

Gabro, 11:27
Gabrielle (Xena's moon), 1:32, 1:48

2006 *Astronomy* magazine index

galactic equator, and spin of stars, 6:70–6:71
galaxies

See also names of specific galaxies

collisions of

despite expanding universe, 3:72–3:73

frequency of, 4:32

dark galaxies, 7:22

mergers of, and black holes, 5:32

galaxy clusters, lensing, 10:27

Galle Crater (on Mars), 8:31

gamma ray bursts (GRBs), 1:34, 7:44–7:47

gamma rays, 6:28

glaciers, melting, 6:25

Global Positioning Satellite (GPS), 4:30

globular clusters

difference from dwarf spheroidal

galaxies, 4:76–4:77

observing, 6:74–6:77

GPS (Global Positioning Satellite), 4:30

GRACE (Gravity Recovery and Climate

Experiment), 11:25

grand unified theory (GUT), 1:16

Gravity Probe B satellite, 2:24

Gravity Recovery and Climate Experiment (GRACE), 11:25

GRBs (gamma ray bursts), 1:34, 7:44–7:47

Greenland, melting glaciers from, 6:25

Gusev Crater (on Mars), meteorites

originating from, 11:28

GUT (grand unified theory), 1:16

H

Haag, Robert, 8:84–8:87

Hayabusa (probe), 3:32–3:35

HD 69830 (star), 9:22

HE0457-5439 (star), 3:30

heavy hydrogen. *See* deuterium

Helix Nebula, 1:14–1:15, 5:27

Hercules (constellation), 7:16, 8:20

Horkheimer, Jack, 1:88–1:91

Horsehead Nebula, 12:66–12:71

Hubble Space Telescope, Advanced Camera

for Surveys (ACS), 10:24

Hubble Ultra Deep Field, 4:77

HUDF-JD2 (galaxy), 1:36

hurricanes, and global warming, 12:27

Huygens (probe), 1:48–1:49

hydrogen, heavy. *See* deuterium

Hyperion (Saturn's moon), 1:28

I

Iapetus (Saturn's moon)

coloring of, 1:44–1:45

whether once had ring, 12:25

Imager for Magnetopause-to-Aurora Global Exploration (IMAGE), 6:27

interferometry, 11:44–11:45

International Space Station (ISS)

continuation of assembly process, 11:28

expansion of, 3:26

golf balls shot from, 12:28

Miniature Autonomous Extravehicular

Robotic Camera (Mini AERCam), 7:24

iron meteorites, 8:68–8:69

ISS. *See* International Space Station (ISS)

Itokawa (asteroid), 1:34, 3:32–3:35

J

Jules Verne (Automated Transfer Vehicle), 3:25

Jupiter

asteroids between orbit of Mars and, 8:38–8:39

maps of, most detailed, 7:26

missions to, 11:58–11:63

opposition, 6:78–6:81

Red Spot, Jr., 9:24

red spots, touching each other, 11:26

K

Kapteyn's Star, 1:50–1:55

Kasei Vallis (on Mars), 2:26, 12:29

L

Large Magellanic Cloud (LMC), 12:24

lava tubes, 4:26

LCROSS (Lunar Crater Observation and Sensing Satellite), 8:30

Leonid meteor shower, 11:74–11:77

life, search for on other planets, 11:58–11:63

light

forms of, 3:62–3:63

speed of, 11:46

LMC (Large Magellanic Cloud), 12:24

Lunar Crater Observation and Sensing

Satellite (LCROSS), 8:30

M

M15 (globular cluster), 3:26

M82 (galaxy), 8:24

magnetars, 11:32–11:37

magnetic fields

effect on jets from dying stars, 8:26

of neutron stars, 8:16

magnifications, used by 19th-century

astronomers, 9:63

Mars

asteroids between orbit of Jupiter and, 8:38–8:39

Bacolor Crater, 5:29

Chasma Boreale, 9:25

crater on, unnamed, 3:30

dust-laden gas jets on, 12:26

dust storm on, 2:30

Galle Crater, 8:31

gullies west of Hellas Basin, 1:30

Gusev Crater, 11:28

Kasei Vallis, 2:26, 12:29

last year's images of, 6:84–6:87

miniature probes to be sent to, 11:25

Nanedi Valles, 8:28

Pollack Crater, 3:30

Rabe Crater, 9:27

retreating dry ice mesas on, 1:32

south pole of, branching pattern on, 7:48–7:51

strong early magnetism, 2:24

surface of, discoveries by Spirit and

Opportunity rovers, 1:44–1:45

time on, 3:42–3:45

Valle Marineris, 5:68–5:71

water on, 12:35–12:41

Mars Express (spacecraft), 4:28

Mars Reconnaissance Orbiter (MRO),

12:35–12:41

Mars Rover Opportunity, 10:27

MaxKuei 80HD (amateur telescope), 3:86–3:88

Meade LX series telescopes, 2:84–2:87

Mercury

early impact on, 7:28

observing with naked eye, 2:74–2:75

solar transit, 11:80–11:81

Messier Catalog, 3:74–3:77

Meteor Crater, Arizona, 8:46–8:51

meteors and meteorites

collecting meteorites, 8:70–8:73

iron meteorites, 8:68–8:69

meteorite dealer Robert Haag, 8:84–8:87

meteorites originating from Mars' Gusev Crater, 11:28

origins of, 8:64–8:67

recognizing meteorites, 8:90

stone meteorites, 8:62–8:63

stony-iron meteorites, 8:74–8:75

studying meteorite particles, 8:32–8:37

third-largest meteorite found, 3:28

Milky Way Galaxy

core of, whether consists of black hole, 11:30

new satellites of, 9:29

Miniature Autonomous Extravehicular

Robotic Camera (Mini AERCam), 7:24

moon (Earth's)

Billy Crater, 6:28

De Gasparis (crater), 8:27

exploration of, effect of dust on, 3:46–3:51

making lunar mosaic, 12:74–12:77

observing, 3:18, 4:78–4:80

plans for return trip to, 10:16

ring around, 2:73

Robotic Lunar Exploration Program

(RLEP), 2:31

terminator of, 4:76

MRO (Mars Reconnaissance Orbiter),

12:35–12:41

N

N44 superbubble, 5:32

Nanedi Valles (on Mars), 8:28

NASA (National Aeronautics and Space

Administration)

budget, 5:26

Moon landing plans, 2:62–2:67

resignation of members of Advisory

Council science committee, 12:25

National Astronomy Day, 5:20

nebulae. *See* names of specific nebulae

Neptune, missions to, 11:58–11:63

neutron stars

if two collide, 1:80–1:81

magnetic fields of, 8:16

narrow jets spewing from, 9:26

New Horizons (spacecraft), 1:31, 4:32

Nextsat (satellite), 10:28

NGC 253 (galaxy), 2:10–2:11

NGC 265 (cluster), 8:29

NGC 290 (cluster), 8:29

NGC 346 (star cluster), 4:10–4:11

NGC 1097 (galaxy), 2:22

NGC 1275 (galaxy), 4:31

NGC 1309 (spiral galaxy), 7:23

2006 *Astronomy* magazine index

NGC 1333 (galaxy), 3:22
NGC 1350 (galaxy), 1:36
NGC 1427A (galaxy), 6:10–6:11
NGC 4579 (galaxy), 6:25

O

observation, astronomical
 in August, 8:22
 favorite objects, 11:18
 in October, 10:20
 in winter, 12:20
Opportunity (Mars rover), 1:44–1:45
orbits, whether planets can share, 6:71
Orion (constellation), 2:20
Orion (Crew Exploration Vehicle), 11:26
Orion Nebula (M42)
 dust grains in proplyds of, 5:26
 most detailed image of, 5:24
 observing, 1:72–1:79
 photographs of, 11:24
 star formation in, 5:26
 stars in, 9:10–9:11

P

particle astrophysics, 9:42–9:47
Payne-Gaposchkin, Cecilia, 1:56–1:59
Perseids (meteor showers), 8:76–8:77
Phoenix 80S (amateur telescope), 3:86–3:88
photons
 and dark matter, 9:63
 whether have force, 8:90
photon-to-baryon ratio, 1:30
pinwheels, in Quintuplet cluster, 12:29
planets
 See also extrasolar planets; *names of specific planets*
 free-floating, 11:44–11:47
 interiors of, 4:16
 pulsar planets, 9:25
 search for life on, 11:58–11:63
 whether can share same orbit, 6:71
plasma, 7:72–7:73
Pleiades (star cluster), 4:52, 11:48
Pluto
 demoted to dwarf planet, 12:14, 12:78–12:79
 moons of, 6:44–6:51
Polaris (North Star), 4:62–4:67
Pollack Crater (on Mars), 3:30
pulsar planets, 9:25

Q

quantum mechanics, 7:12
quasars, why emit jets of materials, 5:72
Quintuplet cluster, pinwheels in, 12:29

R

Rabe Crater (on Mars), 9:27
radiation, protection from, 3:64–3:69
Red Spot, Jr. (on Jupiter), 9:24
red supergiant stars, 5:27
relativity, theory of, 3:28
RLEP (Robotic Lunar Exploration Program), 2:31
Robert's Quartet, 3:25
Robotic Lunar Exploration Program (RLEP), 2:31

RS Ophiuchi (RS Oph), 9:28

S

Sagittarius (constellation), 9:20
SALT (South African Large Telescope), 1:34
satellites, altitude of, 6:70
Saturn
 missions to, 11:58–11:63
 moons of, 7:26, 9:24. *See also names of specific moons*
 observing, 1:82–1:85, 2:52
 rings of, 7:28, 9:24
 secrets of revealed by Cassini, 7:30–7:35
 storm on, 6:28
SGR 1806-20 (magnetar), 1:40
Sgr A* (radio source), 3:28
short gamma ray bursts (GRBs), 1:34
Sloan Digital Sky Survey, 5:26
Solar and Heliospheric Observatory (SOHO), 9:24
solar system, asteroid bombardment of, 3:24
South African Large Telescope (SALT), 1:34
spacecraft, inflatable, 4:28
space shuttle missions. *See names of specific space shuttles*
Space Station Remote Manipulator System (SSRMS), 5:28
speed of objects in space, 9:58–9:59
SPHERES (Synchronized Position, Hold, Engage, Reorient Experimental Satellites), 9:26
Spirit (Mars rover), 1:44–1:45
SSETI (Student Space Exploration and Technology Initiative), 2:29
SSRMS (Space Station Remote Manipulator System), 5:28
star clusters, in Milky Way, 4:26
Stardust (spacecraft), 4:32
stars
 See also binary stars; brown dwarf stars; neutron stars; *specific types of stars*;
 star clusters
 chemistry of, 4:38
 determining age of, 11:71
 dying, effect of magnetic fields on jets from, 8:26
 early, faint glow from, 3:24
 hottest, 4:39
 how close can get to each other, 1:81
 large, but short-lived, 4:40–4:45
 largest, 4:36
 most distant, 4:37
 nearest, 4:46–4:51
 planet-bearing, heavy elements in, 1:30
 spin of, and galactic equator, 6:70–6:71
Stellafane Convention, 7:14
Stellarvue Telescopes SV4 apochromatic refractor, 11:80–11:83
stone meteorites, 8:62–8:63
stony-iron meteorites, 8:74–8:75
string theory, 1:16
stromatolites, 10:24
Student Space Exploration and Technology Initiative (SSETI), 2:29
SuitSat, 6:24
Sun
 coronal mass ejections, 12:60–12:61

 interior of, 4:16
 sending spacecraft to, 12:42–12:47
 supergiant stars. *See* red supergiant stars
 supernovae
 effects of, 6:42–6:43
 observing, 9:64–9:67
 in Sloan Digital Sky Survey, 5:26
SV4 apochromatic refractor, 11:80–11:83
Synchronized Position, Hold, Engage, Reorient Experimental Satellites (SPHERES), 9:26

T

Tarantula Nebula, 3:10–3:11, 8:30
telescopes, amateur. *See names of specific telescopes*
telescopes, professional. *See names of specific telescopes*
Tele Vue's DiopTRx telescopic lenses, 11:74–11:75
Tele Vue TV-60is telescope, 9:78–9:81
terminology, astronomy, 6:14
time, traveling through, 2:32–2:39
Titan (Saturn's moon), 5:40–5:45
 clouds in atmosphere of, 2:24
 Huygens landing on, 1:48–1:49
 possible methane lakes on, 11:30
 Xanadu region of, 11:30–11:31
Titan IV-B (rocket), 2:28
Titius-Bode law, 11:70
Tombaugh, Clyde, 2:40–2:45
Trifid-2 camera, 9:68–9:71
Tye, Henry, 11:64–11:69

U

ultraluminous infrared galaxies (ulirgs), 7:26
universe
 flat, 11:70
 future of, 7:36–7:43
Uranus, blue outer ring of, 7:28
Ursa Major (constellation), 11:8–11:9

V

vacuums, 3:16
Valle Marineris (on Mars), 5:68–5:71
Venus
 acidic clouds and hot surface, 2:46–2:51
 probes that have landed on, 2:72–2:73
Venus Express (probe), 6:25, 7:20
Versa amateur telescopes, 4:90–4:93
Virgo (constellation), 4:68–4:73
Vixen ED80Sf (refractor), 6:90–6:93

W

W5 (star-forming region), 3:25
watches, 2:76–2:79
water, whether needed for life, 11:38–11:43
whale sharks, 2:26
Whirlpool Galaxy, 5:74–5:79, 8:10–8:11
Wild 2 (comet). *See* Comet Wild 2
Wilkinson Microwave Anisotropy Probe (WMAP), 6:22
winter, observing in, 12:20
WMAP (Wilkinson Microwave Anisotropy Probe), 6:22
Wolf-Rayet stars, 2:68–2:71
